

GRASSES

TALL FESCUE GRASSES

The tall fescues have shown that they can stand more heat and drought than Timothy and Brome. They have a very long growing season and in some areas where the winters are not severe will stay green all winter. Prefers a moist rather heavy soil but will thrive on many types excepting exceedingly light soils. Moderately tolerant of alkali and will thrive on acid soils. These grasses are very productive.

Alta Fescue
This has tremendous value as a pasture, good hay or for silage. We suggest mixing it with Clover and Alfalfa either or both. When used for pasture keep it pastured down. If it grows too fast mow it before it gets too tall. We have two lots of Alta, 149 and 150. The 150 being the Certified Blue Tag.

Kentucky 31 Fescue
This is very similar to Alta Fescue. We can't tell the difference between it. This strain originated in Kentucky and is considered by some to be superior. See item 147 on price list.

Alta Fescue Lot 144
The producers for this lot claim for it darker, greener and smoother leaves and higher palatability. We have a lot of this grass and are sure that we get from customers. This is a beautiful quality seed. See item 144 on the price list. Refer to page 16 of our catalog for further information on these fescue grasses.

BROME GRASS

LINCOLN BROME

Brome is one of the most valuable of all grasses being very palatable, nourishing and highly productive. It can be grazed heavily and still retain its palatability. Starts growing early in the spring and adapted to a wide range of soils; except we do not recommend it for very wet land.

The Lincoln Brome is the leading strain of the southern brome. It will stand hotter weather than the Canadian. Is a faster grower and is more aggressive in its growth habit. It is hardy anywhere in the United States and is especially recommended for areas having climatic conditions like the southern two-thirds of Iowa and on south of that. We have some unusually beautiful seed for you this year. It is extra nice. **Item 137, \$36.00 per 100 lbs.; \$18.00 for 50 lbs.**

CANADIAN No. 1 BROME

This is widely used in the northern part of the country. Also further south where they do not want a strain that grows as aggressively as Lincoln. They prefer it especially when mixed with alfalfa or other legumes because it does not crowd the alfalfa out quite so fast. This Canadian No. 1 is excellent quality seed as is of course all our Gro-Coated Brand. **Item 136, \$30.00 per 100 lbs.; \$15.00 for 50 lbs.**

ORCHARD GRASS

There has been a very great increase in the acreage seeded to Orchard Grass which is adapted to the bigger part of the Corn-Belt. It is being used further north all the time. Does best on rich soils but succeeds on light soils and also on moist heavy land. It is known as a bunch grass and therefore preferred by many as when they want to put legumes in with it as it is not as competitive. In combination with Ladino Clover it can't be beat. We suggest 1 lb. Ladino to 10 lbs. of Orchard per acre. This new government program is increasing the demand for all grasses and this Orchard Grass market will probably get quite a bit stronger along with the Fescue and other grasses. See page 17 of our catalog. **Item 142, \$33.00 per 100 lbs.; \$16.65 for 50 lbs.**

RED TOP

This grass will grow on very poor soils; also stands a lot of wet weather as well as drought. It is easy to get started and forms a turf quickly. Is good for both pasture and lawns. Postpaid, 1 lb., \$3.15; 3 lbs., \$2.95; 5 lbs., \$4.25. Item 127 on price list for quantities. The Red Top market, too, is very strong.

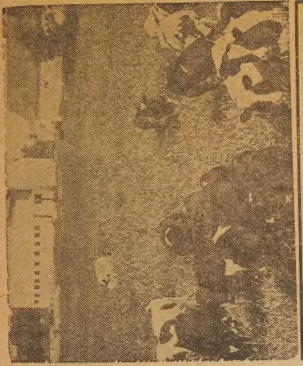

GRASSES

TIMOTHY

This favorite grass will be extensively used because of the proposed government program. It is low in cost, easy to start and maintains itself well. Timothy makes a good sod, combines well with other Clovers or Alfalfa. You will find it a good grass to help check soil erosion. Only requires around 8 lbs. of seed to the acre with Gro-Coated Brand seed. This is available to you in two qualities.

WORLD BRAND GRADE
This is the very finest extra fancy quality. Item No. 79. **\$7.65 per bushel.**

DEALERS FANCY GRADE
Quality frequently sold as the best and very nice quality. Item 78. **\$6.95 per bushel.**

MARVELOUS MIXTURE

See page 15 of our general catalog for full description of this wonderful seedling. It contains approximately 1/2 clovers of different kinds such as Red, Alsike, Sweet Clover, Ladino or 25% red clover, this is a Timothy. Containing mostly high in production. Requires only 8 lbs. per acre and at that rate will give you between 50 to 60 clover seeds per square foot with the Timothy in addition. We sell an enormous amount of this seedling. It is used for hay, pasture, soil erosion control and it is a tremendous value. **Item 95, \$27.95 per 100 lbs.; \$14.10 for 50 lbs.**

BASIC No. 1 PASTURE

This pasture mixture is also described on page 15 of our catalog and contains approximately 20% Brome, 17% Tall Fescue, 12% Orchard Grass, 16% Red Top, 15% Timothy, 15% Alsike, 15% Ladino and 10% Sweet Clover. This is 65% grasses and 35% legumes. The combination like this gives you ample grass to cut least danger to a minimum and still give you high production, and splendid feeding value at low cost. Use this as the basis for your mixture. We have incorporated Red Top, Alsike, Sweet Clover and so forth as you may choose. That is why we call it Basic No. 1 but in itself it is a splendid seedling. Order item No. 107. **\$35.00 per 100 lbs.; \$17.65 for 50 lbs.**

KENTUCKY BLUE GRASS

This is splendid for pasture and of course basic of all lawn grass mixtures. See page 16 of our catalog. Item 125 on price list for quantities. Small lots postpaid: 1 lb., \$1.10 and 5 lbs., \$4.00 and 10 lbs., \$7.75.

FIVE WAY MIXTURE

50% legumes and the balance Timothy. This is similar to the Marvelous Mixture excepting that it contains no Sweet Clover. Red Clover is substituted for Sweet Clover. This mixture is especially adapted for summer permanent meadows and pastures. You get quantity and quality in this seed mixture. You purchase of the Five Way Mix. The high percentage of clover seed in this mixture gives it the high soil building properties of the seedling. A low seeding cost at 8-10 lbs. per acre and one that can't be beat at any price. For more information see page 16 of our general catalog. We even though you have grass seed in it. The inoculation won't hurt the grass and it will definitely help the legumes. Item 100. **\$31.00 per 100 lbs.; \$15.65 per 50 lbs.**

REED CANARY GRASS

We have a special circular giving information on this grass that we will be glad to mail to you. It is especially a grass for wet land and will grow in almost any conditions. Grows quite tall, maintains its palatability for a long period of time and is a heavy producer. For waterway or heavy wet conditions you will find this one of the best grasses. See item 141, also page 17 of our general catalog.

RYE GRASSES

We refer you to page 17 of our general catalog for description, while not long lived as the others but especially noted for their fast development. **DOMESTIC RYE GRASS.** This should be considered as an annual. Item 128. Only **\$13.00 per 100 lbs.; \$6.70 for 50 lbs.** **PERENNIAL RYE GRASS.** This is a rye grass that lasts for several years. Item 129. Item 125. **\$18.00 per 100 lbs.; \$9.15 for 50 lbs.**

SWEET CLOVER

WORLD BRAND WHITE

This is a tall growing biennial or two year Sweet Clover. It is a very rapid growing Sweet Clover and can grow to a height of 4 or 5 feet. Has a tremendous root growth, stores enormous amounts of nitrogen in the soil as well as quantities of humus. Many farmers follow the practice of sowing this in the spring, pasturing it somewhat in the fall, sometimes taking it for hay crop in the fall the first year and then plowing it under just shortly before corn planting time the next spring. This is generally good for increase of about 25 bushels per acre in the corn field. This World Brand White represents our very finest quality. Practically all White Sweet Clover may contain some trace of yellow and this is offered in that way. For beautiful quality, high purity and germination you can't beat it, and then it is Gro-Coated besides which means you use less seed per acre.

Item 83. \$11.40 per bushel.

WORLD BRAND YELLOW

This blooms about 10 days to 2 weeks earlier than the White. Does not grow quite as tall, generally is somewhat more leafy. While the root growth in the second year will not perhaps be quite as large as the first year it sometimes has more roots. When plowed under the plants will decay quickly adding a lot of humus to the soil as well as plant food. You can carry a tremendous amount of stock per acre when utilized as a pasture. Frequently makes a good hay crop the first fall. This World Brand quality represents the very best in the yellow, is indeed beautiful seed and Gro-Coated.

World Brand. Item No. 86. \$9.90 per bu. We also have this in the Fancy Quality. This is an excellent value. Good dependable quality. A very good second to the World Brand Item No. 85. \$9.30 bu.

NEW MADRID Certified Seed

This is a new yellow variety. It gets off to a fast start when sown. The amount of root growth it makes in the first year is tremendous far exceeding the ordinary white or yellow. This also means more nitrogen in the soil and more humus. As much as 35 to 40% extra growth in the first year are reported. Plants are leafy makes a splendid pasture cover, is a heavy seed producer. It is later flowering than the white while the other yellow is earlier flowering. See page 12 of our general catalog for more detailed information on this wonderful variety of Sweet Clover. We have only limited supplies of it this year. If you are a grower of Sweet Clover you will like this new variety we are sure. Try out at least some of it so that you can see on your own farm its wonderful performance.

Certified. Item No. 91. \$13.95 per bushel. World Brand. Item No. 90. \$11.40 per bu.

LOT SPECIAL MIX

This is principally white blossom but will contain more yellow than do any other grades of White. This, however, is considered by many to be a point in its favor. Yellow starts its growth a little earlier and the white later so that it gives a longer pasturing period if you use it that way. From the soil building standpoint it's fully equal to any of these. The quality is in between the World Brand quality and the Lot Do More described below. The price is considerably reduced because it has more of the yellow in it so that this makes the value more attractive. This is a tremendously popular value with our trade and permits you to make an extra savings on your seed bill.

Item No. 87. \$9.00 per bushel.

LOT DO-MORE Our Lowest Priced Grade

This seed isn't too nice for looks. It's a splendid performer. This seed has smaller berries in it. That, of course, means that there are many more seeds per pound. Thus, while the germination per hundred seeds runs lower the number of germs per pound is about the same as in the higher priced lots. It's principally White Blossom but will contain some Yellow, can readily cut your seedling costs with this Lot Do More and you will be getting a lot of value in Gro-Coated Sweet Clover seed when you order this.

It can be seeded at about the same rate as World Brand quality, 5 to 6 acres per bushel.

Item No. 80. \$8.70 per bushel.

HUBAM

Annual White Blossom

This Sweet Clover grows only one year. It is quite a favorite with those who want to plow under their crop the same year they sow it. When the Common Sweet Clover is plowed under in the same year it is sown there is sometimes trouble in its coming up again the next year. You don't have that with Hubam, it blooms, bears its seed and completes its growth all in one year. Of course, if it makes seeds there could be some reseeding, but the plants themselves do not live over. It makes quite a good hay crop if cut when beginning to bloom. Like all sweet clover the plant has a very high protein content and it is a splendid soil building crop. It can often give a good cash income in the way of a seed crop.

Like all sweet clovers the seed should be inoculated before it is sown. It takes the same inoculation as is required for other Sweet Clover. We consider this very important. When you have sweet soil and sow inoculated seed yields of up to 4 tons per acre have been obtained. With a protein content of 20 to 25% on a dry basis you can realize the fine returns that can be had from this crop. See page 13 of our catalog for further information.

We have this available in both Choice and World Brand qualities. Item 88 Choice \$10.20 per bu. Item 89 World Brand \$11.85 per bushel.

Be sure to order Inoculation for all Clover and Legume Seed.

Birdsfoot Trefoil

This is a broadleaf trefoil and has many wonderful properties. We can't tell you all about it here. There is more information on it on page 11 of our catalog and we have a circular that will give you additional information.

It is a long lived legume. Never been known to cause any bloat when pastured and many like it especially for that reason. It is adapted to a very wide range of soils. It is drought resistant, will grow also on poorly drained soils and in shallow droughty soil. Its ability to grow on such a wide range of soil has caused some to name it poor land Alfalfa. However, on good soils that have lime it will do its very best. It will, however, stand a lot more acid in the soil than most other legumes.

Since it is slow in establishing itself it is best to consider it in long rotations rather than in short rotations. It does not like too much competition when it is small because the plants are fine, but once established it holds its own better than most other legumes against competition from other grasses. It has a feeding value similar to Alfalfa. Sow around 5 or 6 lbs. to the acre.

European Trefoil

This seems to grow faster start easier and recover more quickly after cutting. It comes through most winters very well.

This is Item No. 65. \$39.00 per bushel.

Certified Empire Trefoil

Some think that this will last longer and maintain itself better. We have had varying reports on this but we carry it for those who want it although it is quite high in price compared to the European. You should order Item 66. \$105.00 per bushel, 1/2 bu., \$52.70; 1/4 bu., \$26.50. Be sure to order inoculation for Trefoil.

DWARF ESSEX RAPE

We recommend this crop to all hog growers who have land of good fertility where you may reasonably expect favorable moisture conditions. It will really cut down the cost of producing pork because it furnishes so much growth which is very high in protein. Grows fast, you can pasture it in 6 to 8 weeks after seeding. The cost is low only 5 to 6 pounds to the acre, will afford pasture until first frost in the fall. See page 12 of our catalog for other information.

Can be sown from about small grain seeding time until mid summer.

Order Item 233. \$15.00 per cwt.; 50 lbs., \$7.70.

HAIRY OR WINTER VETCH

Through the bigger part of our area this Vetch is sown in the fall. Oftentimes with a crop like winter rye and then plowed under the next spring or utilized then for hay or pasture. When sown in the spring it acts as a biennial. While the growth during the summer may not be too large it will start up in the fall. It likes cool growing weather for best results. It is one of the very best crops that you can use on sandy soils, and is also quite tolerant to acid. Sow around 20 lbs. to the acre. See also page 17 for other information. Be sure to order inoculation when you buy winter vetch.

See Item No. 68. \$12.90 per bushel, 60 lbs.

LESPEDEZA REGULAR KOREAN

We have a circular that will give you more information about Lespedeza that we will be glad to send to you and there is also more information about this wonderful crop on page 12 of our catalog. This crop will grow on very thin land. It likes hot weather and for that reason it is a splendid crop to use in connection with pasture because it grows well when other crops may become dormant. It doesn't grow tall. It is leafy and makes a lot of high quality pasture. Very easy to get started. We think that the Regular Korean should not grow much further north than southern Iowa. Be sure to inoculate any Lespedeza seed you may be buying. That doesn't help the germination, but it can make a big difference in the growth that the crop will make.

See this circular for prices on inoculation. We carry this Regular Korean in the unhulled Item No. 70. \$6.90 per bu. Sow this in the Gro-Coated seed at 15 to 17 pounds to the acre. Then we have the Scarified Item No. 72. \$8.25 per bushel. This doesn't require as much seed per acre. Around 10 to 12 pounds and generally runs a little higher purity and germination.

EARLY KOREAN 19604

This is a variety of Lespedeza that we consider adapted to central Iowa and throughout the United States where climatic conditions are similar. Of course, it can grow further south also. It is better in this northern area than the Regular Korean because it matures earlier. The Korean Lespedeza is an annual and will come up from year to year only if it reseeds itself. If the season is too short it will not make seed. This variety has matured seed 100 miles further north than the ordinary Korean. Grows up to 2 feet high has been reported although you will not always get that tall a growth, it will depend somewhat upon soil fertility. It will grow on very poor land but the heavier growths are obtained on the richer soils. However, even a very slight growth can supply a surprising amount of feed because it is so leafy and those leaves are very high in feeding value. We recommend very much that you use Lespedeza especially in pasture combinations because of its ability to produce during the hot dry weather. The seed is much lower in price this year than it has been.

Last year this sold at \$20.85 a bushel, today you can get the finest quality Gro-Coated Item No. 75 at \$9.00 per bushel. Sow around 14 to 15 pounds to the acre.

SERICEA LESPEDEZA

This is a perennial kind that comes up from the root system instead of from seed that has shattered as the Korean does. It is a coarser growing plant. However, if it is left to stand for a number of years it continues to send up more stems and thus has somewhat finer growth habit. It grows 2 to 4 feet high. We do not recommend that this Lespedeza be sown as early. It seems as though it does better if it is sown somewhat later in the season. The seed is considerably smaller, and in the Gro-Coated seed 10 pounds per acre is a very liberal seeding. This is not recommended for areas to the north of Clarinda. Be sure to read more about this in our circular on Lespedeza which will be sent free upon request.

Order Item No. 76. \$14.70 per bushel, 1/2 bushel \$7.55.

Alfalfa Seedings That Give Extra

BERRY'S NEW BLEND FORMULATIONS

BUFFALO CLOVER ALFA

WORLD BRAND

In a great portion of the main corn belt, Buffalo is one of the heaviest producers of wilt-resistant Alfalfas. It is possible to get still bigger yields by using it in combination such as the blends as shown in the center of this page.

It is a tall growing alfalfa as it is a selection from the Kansas Common. Many farmers like this because of its heavy production, its rapid recovery and excellent quality. It gives you all of the characteristics of the heavy yielding Kansas, plus the wilt-resistance which is becoming such an important factor over so wide an area. We recommend this for areas having climatic conditions similar to those from central Iowa on south. In the World Brand quality you get the finest of quality, it will generally run 99% pure and 90% or better live seed, and it's Gro-Coated, of course.

Item No. 22, \$21.45 per bushel.

CERTIFIED

In addition to the World Brand Buffalo described above we have the Certified Buffalo Alfalfa seed. This is produced under a state inspection system. This system provides for an inspection as to varietal purity and also as to high quality. The use of Certified seed is not as great proportionately as it was a few years ago because now there are much larger acreages of Buffalo seed and all farmers do not go into the Certification program. They would rather sell their seed at a little lower price than to go to the necessary certification procedure. That is why we can offer you the above quality World Brand seed at a materially lower price. However, for those who wish the Certified stock we have it. You will find this Certified stock we have materially superior to ordinary certified because it has the Gro-Coat protection. Always keep in mind that the very best of seed can rot in the ground if it is not protected against rotting, but you do get this protection when you have this Gro-Coat on each seed and that is what you get when you order from Berry's. That's why you can get it at a lower rate per acre and still get equally satisfactory results. If you wish the best in Certified Buffalo.

Order Item No. 21 \$23.10 per bushel.

STATE CERTIFIED SEED

This is the newest wilt-resistant Alfalfa that has been developed to a commercial extent. It is acclaimed by many state authorities to be superior to any other kind of Alfalfa. Tests have indicated that it has greater winter hardiness than Ranger and as well as the winter hardiness of the bacterium wilt. We also have reports that it stands longer when other varieties yellow due to high or insects or diseases. It is unquestionably an Alfalfa that has many wonderful points. It has some indications, however, that it may not be quite perfect as have been indicated in some of its tests, and that is why we believe that Vernal combined with Ranger in some instances. Berry's seed and seed like it will be most satisfactory to you. We have prepared these blends that are developed in the opposite column.

We do, however, have a high State Certified Vernal, the finest of quality Alfalfa you can buy and with the Gro-Coat protection so you don't have to use as much seed per acre. Thus while the cost per bushel might at times run slightly higher the cost per acre will always be lower, and if by chance it is higher and it does not do better for you, you will get that extra money back.

Order item No. 29.

LOT GOLD

Often Sold As Dakota 12

See page 6 of our general catalog for more detailed information in regard to this splendid value. It is a northern grown seed. It is a common type Alfalfa with a vigorous growth habit and one that we think has more rapid recovery than a number of other Alfalfas. It is produced in the northern states which include states like Montana, Idaho, Dakota, Nebraska, Oregon, Wyoming, Washington, etc. It is beautiful top quality seed. Runs around 99% pure. Live seed content of 92% or better, you are a buyer that is very particular about quality you certainly will be pleased with this Lot Gold. It is beautiful and of course, it is Gro-Coated. It does not have the wilt-resistance of the newer varieties, but it will not be a problem then it is an excellent Alfalfa to grow.

Item 16 on price list \$19.50 per bushel.

Long Rotation Blend

NORTHERN Beef and Dairy

This is a formulation that we have developed. We refer to it as a beef and dairy blend because farmers in the beef or dairy business generally like an Alfalfa seedling that will last for several years. The reason that we prefer a blend over a straight variety is because you have in that way plants that have some different growth habits. Some bear leaves a little lower down and others higher. You can increase the amount of leaf growth and that is what contains most of the feeding value in Alfalfa. We use some of Vernal Alfalfa because of its extra hardiness. This Vernal Alfalfa blended with Ranger and Cossack is a seedling that should be hardy anywhere in the United States and we believe it will outproduce any other single Alfalfa in Penna. It is fine Vernal and leafy, heavily productive and we are confident that in another few years the demand for it will exceed that which we have for any one kind. We recommend it to you highly.

Item No. 5 \$22.50 per bushel.

Regular Rotation

We call this Hog Grower Blend because most hog growers practice a little shorter rotation and this formulation fits into that need exceptionally well. You farmers who want clean ground Alfalfa pasture should like this seedling very well. While we call it a Hog Grower Blend that doesn't mean it should only be used by people who specialize in that type of farming. It's really a feeding to use in ordinary rotations to take the place of Red Clover. It is as hardy as any of the average Red Clover seedings and a good many farmers are turning to Red Clover in the place of Red Clover because they have been having better success with their Alfalfa seedling. In these shorter rotations you do not especially need the wilt-resistant Alfalfa because you generally don't come in until the third year. This then is designed for the farmer who wants to grow Alfalfa in a short

EXTRA RED CLOVER VALUES

Lot Beauty Red Clover Containing 25% Alfalfa

We are always on the look-out for special lots of seed that may contain a little crop seed. What we mean by crop seed is seed like Alfalfa for example. That really doesn't hurt the Red Clover at all, in fact, some consider it desirable and always seed a mixture. Even if it has only a small percent of crop seed in it we can buy this seed at a sharp discount and still supply seed of high purity, strong germination, excellent color and so forth. These three lots that are described here are lots just like that. This Lot Beauty we add enough Alfalfa so that it will average out around 25% of the Alfalfa. It is thoroughly cleaned, high purity, strong germinating seed. You can sow around 9 acres with a bushel of this seed so that really pulls your seeding cost down very low. Thus you gain the advantage of the volume of our buying power that makes extra values like this possible. It will run 99% crop purity, is excellent color. The Lot Beauty is a dandy as long as it lasts but again we urge on any of your seeds to buy early because this Government program may force prices much higher as the tremendous demand for seed is already developing. Be sure you get the Gro-Coat kind of seed gives you greater assurance of satisfactory stands, and it is stands that you are after.

Order Item No. 31, \$23.70 per bushel.

LOT LEADER

Red Clover with 25% Timothy

This is similar to Lot Beauty except the crop in this case is Timothy and we make up a lot of this Clover and Timothy combination. Many prefer it to a straight Clover seedling. The Timothy makes a better sod and thus aids in the control of erosion a little better than a straight clover seedling. Also the Timothy helps to hold the Clover erect so that the Clover makes a better growth and the two together will yield more than either one of them grown separately even if the same amount of seed were sown. The seed that we use in the Lot Leader is nice plump stock, has plenty of purple berries, has high quality Timothy in it and yet we can sell it at a very attractive figure. This seed gives a heavy percentage of Clover it's equal to really a straight Clover seedling for all practical purposes. Should you want to pasture it you will have less danger of bloat because the Timothy is there and such a combination seeding gives you ever greater assurance of establishing it stand on your land. Timothy is easy to establish and the Red Clover being Gro-Coated also is splendid. There is a great big measure of value in this Lot Leader because it is one of the lowest cost seedings that we have.

It is Item No. 30, \$21.00 per bushel.

LOT JUST-RITE

Contains about 50% Clovers such as Red, Alsike and Ladino, the balance is Timothy. Here is a mixed seedling that gives you even greater variety than either of the two lots described above and may well outyield it. The amount of less growth that you get in the Clovers from this combination will generally exceed that of a straight Red Clover seedling even though the total percentage of Clover is smaller. Both Alsike and Ladino seeds are very small, run 7 to 800,000 per lb. against 240,000 per lb. for Red Clover. These clovers also grow at somewhat different heights, too, so that you can get a tremendous amount of leaf growth wherein lies most of your feeding value. The Timothy on the other hand is helped by the clovers because it picks up nitrogen from them. The Timothy grows taller and has more protein in the same amount. It supports the Clovers. At 7 lbs. to the acre you have approximately 28 to 30 clover seeds per square foot and the Timothy besides. This Just-Rite is a splendid value and a highly satisfactory seeding. We price this by the hundred pounds.

Item No. 103, \$32.50 cwt., \$16.45 for 50 lbs.

7 lbs. will sow an acre, so you can see that your seeding cost is very attractive. Be sure to get your orders in early.

PAGE FOUR

BERRY'S February 1956

BERRY SEED COMPANY, Clarinda, Iowa

FEBRUARY 1, 1956 PRICE LIST

These prices are freight prepaid on orders for 200 pounds or more in Illinois, Indiana, Missouri, Wisconsin, Minnesota, Michigan, Kansas, Nebraska, Kentucky and Western half of New York, Pennsylvania, West Virginia, and Maryland. In any other area or if by order is less than 200 pounds we give you a flat freight allowance of 1c per lb. or \$1.00 per 100 lbs. Prices at our Retail Stores are the same as this list excepting on some seed grain and Soybeans, where they have lower prices. Be sure to include inoculation for all legume seeds you order.

See Reverse Side For Special Early Buyers Offer

Prices listed are guaranteed against decline. Our next price list in early March will be to higher on many items. An unprecedented demand exists for seed this time. Many seedings were lost last fall. New Government seeding program will make big drain on seed supplies. Also take advantage of 9 piece Knife Set offer. One of the most amazing values we have ever had. Supply limited. First come, first served. Don't delay—Order today.

HARDY RED CLOVER

Hardy Central States Medium Red Clover

Supplies of Medium Red Clover seed are quite a bit better than they were a year ago. However, with this new Government Program in the offing there are many indications that we will see stronger markets on Red Clover. In fact at the time that this goes to press the market is fully \$5.00 a hundred over the price that prevailed last fall. Whether there will be any "fire works" in prices remains to be seen. Certainly we advise every one of our customers who is going to be needing Medium Red Clover to buy their requirements now. Be sure, of course, that you get it with the Gro-Coat protection because then you won't have to sow as much per acre as more of the seeds that you sow will make plants. So your cost per acre is definitely lower even though the price per bushel might be a little higher, and what's more you have greater assurance of getting satisfactory stands. See page 5 of our catalog for further information on Medium Red Clover.

In addition to better stands our customers report plants come up faster, grow more vigorously, have longer root systems, stool out better and will recover more quickly after cutting. This no doubt is because the plants are healthier. All and all there is nothing cheaper or more satisfactory you can put in the ground this year than Gro-Coated Clovers or any other seed for that matter.

WORLD BRAND

This is the extra fancy grade. High purity. Fine color. Strong germination. This is top quality seed in every respect. Order Red Clover Seed now.

\$25.20 per bu.

WORLD BRAND CANADIAN

We have some beautiful Extra Hardy Canadian Grown Medium Red that we consider an outstanding value. Item 34-A.

\$27.90 per bu.

FANCY GRADE

This runs the World Brand quite a close second. It is not as nice in color. Germination is a little lower but it is a splendid value. With Gro-Coat protection each seed has a better opportunity to make a strong healthy plant. That means more plants per acre. Better stands. Larger profits. Fancy Grade is a good buy. Item 33.

\$25.80 per bu.

PLANET BRAND

This is our lowest priced lot of this Central States Hardy Red Clover. It is somewhat off colored. Germination per hundred seeds is somewhat lower. The seeds however, are smaller so you have more seeds per acre at your regular seedling rates. That is why Berrys' lower priced grades are so popular with many boys. See Item 32 on enclosed price list.

\$22.50 per bu.

KENLAND

Medium Red Clover Certified

This variety of Clover definitely has higher disease resistance than most kinds of Medium Red Clover. Practically every area that we know of where Kenland Clover was sown all the farmers in the neighborhood wanted it the next year. This variety is made up of seven superior strains of Red Clover being combined into one variety. Through interesting and selection it very definitely is a superior clover. See page 9 of our general catalog. Item No. 37. We have this in the Blue Tag State Certified Seed which is the very finest that can be bought and it is all Gro-Coated too. **\$30.30 per bushel.**

World Brand

We have been able to obtain some beautiful quality Kenland Red Clover that was not Certified by the farmers growing it simply because they didn't go to the trouble of having it done, but it is bright plump, clean high purity, strong germination, and a very splendid value and it is \$1.00 a hundred cheaper in price.

Order Item 38, **\$29.70 per bushel.**

LOT

CHAMPION

50% Alfalfa, 50% Red Clover

If you are looking for a crop that you could either plow under this fall or that you could let stand over a year for hay and soil building, this Lot Champion is a good selection. The Alfalfa in it is the southwestern grown and that's widely used to give quick results. Of course, that's not a regular winter hardy Alfalfa and yet we find often when sown in combination with other clovers that it winters over exceptionally well unless the conditions are quite severe. It generally lives over one winter and then next year it makes a splendid crop for hay or you can mix it with some grass seed if you wish. At 8 pounds to the acre you have around 28 clovers seed and 24 Alfalfa seeds per square foot, so you see there is plenty of clover even though the Alfalfa might winter kill.

Item C. Freight paid price or with freight allowance as explained on the address part of this circular. **\$22.50 per bushel.**

See Page 4 for Other Clovers

IDAHO or Western

World Brand

The most beautiful looking Red Clover seed that is produced comes from Idaho areas immediately around it. Beautiful color, big berries 90 or better purity 90% or better live seed. We have many customers who will sow nothing but this kind of seed. If you demand the very finest you won't be disappointed on our World Brand Idaho.

Item No. 35, **\$29.10 per bushel.**

Lot More Hardy

This is very similar to the World Brand described above but it has about 4% crop seed in it. The crop seed will be largely Alfalfa. Counting this in it will equal the World Brand in quality in every other respect. Just as fine looking, most people can't tell the difference between them and if you don't object to a little crop seed you will like this Lot More Hardy because it is very materially lower in price. Of any of these top grades of clover a bushel of Gro-Coated Seed will sow 10 acres whereas with regular seed figure 8 acres per bushel this is where the 20% saving comes in.

Item 36, **\$27.00 per bushel.**

BE SURE TO ORDER INOCULATION FOR LEGUME MIXTURES

BIG GROWING MAMMOTH RED CLOVER

WORLD BRAND

A larger growing plant than the Medium Red, somewhat coarser. Makes a larger crop in the first cutting, but the second cutting is generally not as tall as the Medium Red, but affords a lot of pasture. It matures a little later than the Medium Red, generally lives longer, it's splendid to use in pasture combinations or for soil building. World Brand represents the very finest quality. Item No. 41, **\$25.80 per bu.** Same quality CANADIAN GROWN Extra Hardy Item No. 41A, **\$24.60 bu.**

UNIVERSAL BRAND

Very serviceable and dependable quality. May contain a trace of other crop seed, otherwise a splendid value. All Gro-Coated and guaranteed satisfactory. Item No. 40, **\$21.60 per bushel.**

LOT

SOIL-BUILDER

65% Mammoth, 35% Sweet

We like this remarkably well for soil improvement. It has enough Sweet Clover in it to make a deep penetrating root system and then the Mammoth to give the more fibrous roots in the top soil. It gives you a wonderful root growth and an enormous tonnage in top growth. The Mammoth grows up in the Sweet Clover, it all grows erect. Will produce a tremendous amount of feed. If you plow under a crop it does wonders for your soil and it's way down the line in price. This is a dandy to mix with grasses too for pasture.

This lot is everything that its name implies. A real soil building crop. It adds tons of humus to your land and lots of nitrogen. We are able to make an especially low price on this because we purchased some lots that are grown mixed, and thus could get them at a substantial discount. It's of course Gro-Coated like all our other seeds, and like all legumes we strongly advise that you inoculate any clover seed that you sow. A bushel of this Lot Soilbuilder will sow 9 acres.

Order Item No. 43. Only **\$18.90 per bushel.**

LOT BIG-BOY

High Purity Lot Including 4% of Crop Seed.

Here is another example of superior value that you can obtain from Berrys. We purchased this lot of seed because it will run 99% pure Clovers. It contains about 4% of other clovers such as Alfalfa and Sweet Clover. It will not average over 4% of such clovers. That small percentage can hardly have any technical effect on the quality of the crop that you would produce. It is because of this crop percentage however, that we can buy this seed at special advantage and offer it to you as an extra value. The seed is otherwise very similar in general appearance to our Fancy Grade of Medium Red described above. Not quite as bright as World Brand. Capable of producing fine stands at regular seedling rates. Our germination tests show 80-85% live seed. You will get your money's worth and then some in this Lot Big Boy. Item No. 42, **\$22.95 per bushel.**

ALSLIKE

WORLD BRAND

Please refer to page 11 of our general catalog for full description as to the characteristics of Alslike clover seed. This fine smooth stemmed clover makes a wonderful quality of hay and will stand more wet weather than any other clover, also stands trampling quite well. Splendid to use in pasture combinations with grasses like Fescue and Timothy. Can be top seeded on old pastures. Seed is small, a little goes a long ways. 4 to 5 pounds will sow an acre alone, or top seeded where you have other grasses, a couple of pounds is enough. Since a bushel will sow 12 or more acres you can see that the cost per acre is only \$1.80 or less. That is an exceeding low cost for a top quality seedling. In our World Brand quality you obtain an exceptionally nice grade, all Gro-Coated and protected to give you greatest possible assurance of getting splendid stands.

Item No. 54, **\$21.90 per bushel.**

UNIVERSAL BRAND

A very good choice to fancy, not as bright color as the World brand with a little smaller berries. However, it does not require any heavier seeding because you get more seeds per pound in this somewhat lower priced quality. The serviceable character of second grades appeals to our economy minded customers as when Gro-Coated you have the greatest assurance of getting the very best performance from every seed.

Item No. 52, **\$18.90 per bushel.**

for Our
Circular
on
Ladino

Giant White Dutch Clover

CERTIFIED BLUE TAG SEED

This Clover can be used for pasture. You can put it in a silo and it has been widely used as a hay crop. It is widely adapted, easy to start, perennial clover, very palatable. It starts growing early in the spring. Will stand wetter land than Alfalfa or Red Clover. Produces abundantly on upland of fair to good fertility. It has very fleshy, creeping stems that root at the joint. It covers the ground very thoroughly. The blossoms sometimes are as large as Red Clover but of course look more like the White Dutch Blossom. You can use it as a straight Ladino pasture for poultry but for pasture for sheep and cattle you should use considerable grass with it in order to reduce the danger of bloat.

The reports used as a poultry range indicates yields as high as 30 to 40 tons of green feed per acre. Analyses as high as 30% protein on a dry basis. An 8 acre range carried from 2,500 to 3,000 head of poultry from April until October. Illinois reported three cows pastured per acre throughout the grazing season. This crop is very widely adapted. It is grown from the Atlantic to the Pacific and south into Tennessee for pasture, hay and silage. It really is a wonderful crop when properly used. Ask us for our free circular on Ladino Clover. Use it to seed old pasture without covering. If sown alone 2 pounds per acre is enough. A half to one pound, and even a quarter of a pound to the acre added to other seedings is good.

The seed that we have for you is the genuine State Certified Ladino. There is nothing better. In small lots of course, it does not come with a state seal but it is all genuine certified stock. Item No. 63.

\$48.00 per bushel. Postpaid: 1 lb., \$1.15; 5 lbs., \$4.75; 10 lbs., \$9.25.

OATS

The Test weight of your seed has a tremendous effect

on yield. When you sow BLUESEAL PROCESSED you sow the VERY BEST

CERTIFIED MISSOURI 0-205

For an all around top performing oat Missouri 0-205 is hard to beat. The oatmeal companies don't like them so well because they don't make good oatmeal, but only 5% of the oats go that way. If you want oats for consumption on the farm we consider this outstanding for any areas having conditions similar to Missouri and Iowa. It is fairly long grain with a thin hull. The groat is unusually large. Resistance to race 45 and 57 crown rust and race 7 stem rust. It is a tremendous yielder. We believe you will find these oats highly satisfactory. In tests made with other varieties like Clinton and Andrew they produced \$11.00 per acre more. Bigger yields. More meat. Don't pass up Missouri 0-205. It's a dandy.

See items No. 164 and 165 on price list in the center of this circular.

CERTIFIED BONHAM

Similar to the Cherokee in maturity, grain characteristics and disease resistance. It grows a little taller straw. Its early maturity enables it to fill better where later maturities might get caught by high temperatures. It outyielded the Cherokees in Iowa tests by around 6 bushels to the acre. Since it has a taller straw it is preferred by some on thinner land. Under varying conditions we think very highly of this oat. It was originally an Iowa cross but was named by Michigan. We have this only in the Certified stock. See item No. 166 on price list.

Certified CHEROKEE Reselect

The original Cherokee that was sold a few years ago had quite a little variation in its character, but by reselection this line has been greatly improved. The grain has a pinkish ivory color heavy test weight and has one of the nicest grains that you will ever find in such an early oat. The heavy test weight of this grain makes it really outstanding. We know that when you get it. Has moderate tolerance to race 45 crown rust. Resistant to race 8 stem rust and somewhat susceptible to race 7 and septoria black stem blight. Beautiful blue seal processed quality.

See item 170 and 171 for prices on Certified and non-Certified stock.

Certified NEMAHA Reselect

Like the Cherokee this variety has been refined by reselection and it now ranks as one of the leading early oat varieties. It is very similar to the Cherokee, as it is quite an early maturing variety. Meaty, thin hulled. In northern areas will do about as well as the later ones and farther south they are one of the very top selections to make. Resistant to the common races of leaf rust except 45 and 57 and it has tolerance to them. Medium stiff straw.

See items No. 168 and 169 on the price list.

All of our seed oats have a special Formula Gro-Coat protection.

Golden Beauty Brand Clarion

Clarion is one of the newest in varieties of oats that has come along. It was first introduced in 1946 and has been very carefully tested. It has a wide area of adaptability and certainly has been highly popular. It has given wonderful performance all the way from Nebraska to New York.

In our Golden Beauty Brand Clarion we have what you might call a super blue seal processed oat, and we will guarantee you anything that you may sow. If it does not do so we will refund you the difference between what you pay for this brand and for the ordinary Certified Clarion. We used to carry this Golden Beauty Brand in the Clinton, but the Clarion seemed so much superior that we are now using this brand on this wonderful new variety.

See item 174 on price list.

CERTIFIED CLARION

Clarion in one respect resembles Clinton but it is far superior to it in disease resistance. Clinton is passing out of the picture and the Clarion is replacing it. It has produced extremely heavy yields. Has very stiff straw, resistance to race 7 stem rust and has field tolerance to crown rust. We really believe that for the east area of the spring oat section throughout the central corn belt that these Clarion oats will produce as fine a commercial quality of oats and in greater abundance than any of the other varieties. We have these available to you in the Certified stock, see item 176 on price list and also in the Golden Beauty Brand as explained above.

Certified SAUK OATS

This was developed by the state of Wisconsin and first released in 1954. One of the newest varieties oat. Medium tall straw, moderately late in maturity. Have showed up exceptionally high both in yield and in test weight. They are quite similar to the Branch Oats which are pretty popular throughout the northern states. Sauk's are very resistant to rust and will be on the recommended list in most oat producing states this year. We, of course, have the Blue Seal Process stock for you which means the very top in quality in every respect. A beautiful oat, not top many of them available but we should be able to take care of all orders that don't come in too late.

See item No. 162 on our price list.

Certified CLINTLAND

This oat is similar to the Clinton but is far superior to it in that it is resistant to all crown rust now found in this country. It also has moderate resistance to blackstem. Many of you like the Clinton and are still using it. You will like the Clintland better. If you have found that the Clinton has gone down in your area you will do well to select this Clintland to replace it. Tests in Iowa put it right at the top and that is true of eastern Nebraska, Illinois, Ohio, Indiana and our seed has shown a test weight up to 44 lbs. and a germination of 96%. You will be amazed at the quality and thoroughly delighted. We have a limited supply. Reserve your requirements early.

See item No. 167 on price list.

SEE PAGE 22 of our General Catalog for Information on Barley, Wheat and Rye

HIGH QUALITY SOYBEAN SEED

BLACKHAWK

One of our early bean varieties. Wonderful main crop for areas like northern Iowa, southern Michigan, Minnesota and those having similar climatic conditions. Similar to Hawkeye but week earlier and about two weeks earlier than Lincoln. Splendid for combining, a heavy yielder, excellent for late planting where you want to get the winter wheat on the ground early.

See items 185CE and 185NO on our price list.

HAROSoy

About 15 days earlier than Lincoln. An excellent main crop in the area stretching from about Sioux City, Iowa, east to Northern Illinois into Ohio and, of course, Wisconsin and Minnesota. Further south Harosoy's are used for late planting or when they want to get the crop off the ground early.

See items 181CE and 181NO on price list.

HAWKEYE

A splendid main crop bean north central Iowa, northern Illinois into Indiana, Ohio, Nebraska. Stalks are strong. Pods are mostly three seeded. One of the very best beans grown throughout Iowa. Yields of over 40 bushels per acre recorded. Can also be used farther south.

See items 184CE and 184NO on price list.

HAY BEANS

Finer stemmed than the other varieties. If you want it strictly for hay buy this item. Plant at the rate of a bushel and a half to the acre. We generally supply the Kingwa bean for this although other varieties may be used. A big help on feed shortages in some years. They produce heavy crops of high protein hay, about equal to alfalfa. Refer to page 14 of our catalog for further description on soy beans.

See item 188-NO on price list.

CLARK

A splendid variety for the southern third of Iowa down into Missouri and other areas having similar conditions. Quite similar to Lincoln. They have outyielded Adams and Lincoln, as well as Chief. Not quite as tall growing as Chief. Has excellent lodging resistance. Recommended for southeastern Nebraska, northeastern Kansas, southern third of Iowa. Matures about three days later than Lincoln, four days earlier than Chiefs. Beans are fairly large. They are outstanding beans in its maturity class that has yet been developed and we can recommend it to you very highly.

See item No. 180CE and 180NO on price list.

IMPORTANT

We want to recommend that especially whatever variety of soy bean that you plant that you make sure the seed stock that we have is exceptionally good that you inoculate the seed because inoculation can have a big bearing on the development of the crop and we consider that of very prime importance.

ADAMS

Very lodge resistant, definitely an outstanding variety of soy beans. It is a little earlier than Lincoln, has more oil and higher protein content. It has been doing a wonderful job and the seed stock that we have is exceptionally nice. Let us take care of you on any soy bean needs because we know we can please you with the quality of our seed.

See items 183CE and 183NO on price list.

BERRY'S GRO-COATED HYBRIDS

BRAND

Plant them next to your top hybrid.

You have unquestionably planted a number of hybrids and have selected that which seemed to be the best to you. We have supplied many farmers who thought they had the very best until they planted Berry's Gro-Coated Hybrids. We urge you for your own interest to get at least a small quantity of the maturity hybrid that fits your requirements best and plant it side by side under similar conditions. We are sure that next year your orders will be largely for Berry's Gro-Coated corn.

Not Gro-Coated

Showing difference in root growth. Same variety, soil and all conditions, planted at the same time.

Gro-Coated

401 80 to 85 Day Type Our earliest variety, stiff stalk, dark green foliage, medium short shank, big root system, highly resistant to lodging, well adapted to heavy planting rates. A splendid yielder for such an early type.
\$12.50 a bushel Flat \$9.50 Round

405 90 to 100 Day Type Stiff stalk, good lodging resistance, medium long shank, deep kernels, stalks quite leafy, often used for ensilage, splendid as a main crop in northern Iowa or for an early planting farther south. It's adapted to a wide area and it is a dandy.
\$12.50 a bushel Flat \$9.50 Round

425 90 to 95 Day Type Maturity between 401 and 405. Extra stiff stalk, remarkable standing ability, ears borne a little below medium, nice length ear with deep grain, farm reports show marked tolerance to corn borer. An excellent corn on land of high fertility. It has outyielded many later maturing kinds.
\$12.50 a bushel Flat \$9.50 Round

450 95 to 100 Day Type This is about the same maturity as 405. The ear height is a little lower; has a medium short shank; husks cover the ears well so there is very little ear spoilage; holds its ears well and plants are strong. There is practically no lodging. It is very heavy yielding. One of the newest and best in our 400 line. Does well in the regular 400 area. Southern customers will like it too if they want early maturing corn with well covered ears. Splendid variety.
\$12.50 a bushel Flat \$9.50 Round

606 105 to 110 Day Type This has an exceptionally long ear, which is generally completely filled. One of our finest yielders and featured by many companies under a different name at a price of \$3.00 to \$4.00 a bushel more. It does have exceptional yielding ability. Has excellent tolerance to the corn borer and a wonderful feeding corn. You should get acquainted with this hybrid, plant at least a portion of your acreage to it.
\$11.75 a bushel Flat \$8.50 Round

618 105 to 112 Day Type We have only a comparatively few bushels left of this new one which promises to be the best we have ever developed. Splendid for North Central and Central Illinois and throughout Central Iowa and Indiana, Ohio having similar climatic conditions. We have to limit this one bushel to a customer. Medium height, excellent stalk, plant it for hand or machine picking. You just simply have to see it to appreciate it. See page 18 of our catalog for further description.
\$11.75 a bushel Flat \$8.50 Round

615B 107 to 110 Day Type This is medium early. It performs along with the best of the later kinds. Ears are fully covered with husks, grow at medium height on strong stalks. Kernels have a reddish tinge on the side, ears hang on well. We have seen this corn perform under varied conditions and it has always been a winner. We believe you will be highly pleased.
\$11.75 a bushel Flat \$8.50 Round

625 108 to 115 Day Type Medium late maturity, comes close to the 800 series. Deep kernels short shank, strong stalk. Has a heavy shelling rate, holds its ears well, similar to US 13 in appearance, but has many factors of superiority to it. If you want something just a little earlier than the later series, this is a good buy.
\$11.75 a bushel Flat \$8.50 Round

800 115 to 120 Day Type Suitable wherever US 13 is adapted. A little earlier, holds its ears better, thick heavy ears, deep grains, high shelling percentage, a fine feeding corn, can be planted at heavy rates if you have the soil fertility. A splendid corn.
\$11.00 a bushel Flat \$8.00 Round

813 115 to 120 Day Type Similar to 800 but contains an additional line which tends to prolong the pollinating period thus giving assurance of better filled ears when high temperatures prevail at tasseling time. It takes a lot of hot weather. Adapted to heavy planting rates if desired and it has been our biggest seller in the 800 series.
\$11.00 a bushel Flat \$8.00 Round

825A 112 to 118 Day Type This is a little earlier than the other 800's and our newest development in the 800 series. The performance records indicate that it will probably replace both of the other 800 line. Medium, long, well covered ears, withstands borer infestation well, and many refinements have been worked into this number. If you can use this maturity range be sure to include some 825A.
\$11.00 a bushel Flat \$8.00 Round

BERRY'S FAMOUS BLENDS

We do not have space here to give you full information on these blends. Please refer to pages 18 and 19 of our general catalog. We are using different varieties that have similar maturity and yet not too close together so as to prolong the pollinating period and the results in many cases have been sensational. This comes in two maturity ranges as indicated below. The Regular flat is a grade of corn such as is regularly planted but may have a few off kernels in it. Small flat is graded for accurate planting but is shorter kernels. Thick flat, kernels too round to be classified as round and too thick to make regular flat and then of course, the Regular round. They are really producing the best of their kind.

MEDIUM MATURITY	LATER MATURITY
Regular Flat, not available	Regular Flat..... 8.50
Small Flat..... \$7.50	Small Flat..... 7.25
Thick Flat..... 6.75	Thick Flat..... 6.50
Round..... 6.25	Round..... 6.00

DROUGHT RESISTANT CROPS for HAY and GRAIN

SWEET SUDAN GRASS

This is the regular Sudan crossed with Leota Sorghum. This gives it higher resistance to diseases and it has higher palatability. It is sweeter to the taste. That is why cattle relish it so much. When two crops are grown side by side the cattle eat the Sweet Sudan almost to the ground while just nibbling at the Common. Sweet Sudan makes a taller growth and has broader leaves than Regular Sudan. It is a little later in maturity. It will carry a large amount of stock per acre as a pasture. Pasture it after it gets around 10 inches high until frost. See page 23 of our catalog for further information. Item No. 231. **\$13.00 per 100 lbs.**

REGULAR SUDAN

The Sweet Sudan described above has to a large extent taken the place of the non sweet type. We find however that some farmers prefer the latter so we have secured some of this seed for you. This is the kind that has been used for years and years. A fast grower and a heavy producer. Makes 2 or 3 cuttings in a year.

Item 230, **\$12.50 per 100 lbs.**
See address side of this circular for information on prepaid freight or freight allowances.

Hegari

A heavy yielding grain sorghum. Stalks are very sturdy, of medium height. About six feet, under Clarinda conditions. The crop is very nutritious when used as fodder. Cattle like it. Can be used also for ensilage or grain. Has yielded 3,000 pounds of grain per acre and up to 8 tons of ensilage. Matures earlier than Kaffir and has the same vigor. Cent.

Item 217, 1 to 14 bu. **\$3.95 per bu.;**
over 14 bu. **\$3.90 per bu.**

ATLAS SORGO

This is like Hegari but grows taller. Has yielded up to 187 tons of fodder per acre. In dry season it has outyielded corn and grain by 3 to 1. It is used extensively for grain in the West and from Iowa on east as a fodder crop. It is juicy and sweet and very palatable to live stock. It is an extremely nutritious feed. It appears highly resistant against grasshopper damage and makes excellent ensilage. See page 23 of our general catalog for further description. Item No. 220.

1 to 14 bu. **\$6.95 per bu.;** over 14 bu. **\$6.90 per bu.**

Golden Millet

A quick maturing crop. Do not sow until corn planting time or after. Requires a warm seed bed. Makes a hay crop in 50 to 65 days. Produces growth up to 4 and 5 feet depending on soil fertility and moisture conditions. Feeding value of hay similar to other grasses. Makes best hay if cut where in full bloom. Sow 35 to 45 lbs. per acre for hay. 25 to 30 for seed.

Item 225, 1 to 14 bu. **\$5.15 per bu.;**
over 14 bu. **\$5.10 per bu.**

NORRHUM

One of the combine types of grain sorghum. One of the newest, the earliest, and the best. It is very strong stalk, stands up well, and yields of grain have been consistently high. Average maturity around 90 days depending upon location and conditions. There has been a very big demand for Norrhum since this is the first year it is plentiful so that it ranges in price with the other combine grain sorghums. If you are looking for a good combine in sorghums be sure to plant some Norrhum this year.

Item No. 219, 1 to 14 bu. **\$3.95 per bu.;** over 14 bu. **\$3.90 per bu.**

Redbine Milo

A new variety of combine type, will do approximately the same as corn on land that will produce 50 to 85 bushels an acre. Not susceptible to attack by corn borers, grass hoppers or other insects. Blooms in 60 days, matures early. See page 23 of catalog for further information on this wonderful new grain sorghum.

1 to 14 bu. **\$4.35 per bu.;** over 14 bu. **\$4.30 per bushel.**

PIPER SUDAN

This variety of Sudan Grass is highly popular throughout our area. It was developed in Wisconsin and many rate it a great favorite. Excellent results also have been obtained in Minnesota, Nebraska, New York, Pennsylvania, Illinois and other states. It is quite a new variety, just been on the market in a commercial way for a couple of years. We are very glad to be able to have some of this Sudan Grass for you. It is a variety that resists foliage diseases better than common Sudan. It also stays green longer. The yields of forage and seed have been very heavy. This variety is lower in its prussic acid content and seems generally better adapted to the cooler climates. It has strong seedling vigor, good recovery after grazing and is satisfactory to livestock from the standpoint of palatability. See Item No. 229. **\$13.50 per 100 lbs.**

NORKAN

This crop resembles Atlas Sorgo in many ways but it is a lot earlier, 10 days to 2 weeks, which means it can be grown farther North. It is a cross of Atlas Sorgo and Sumac Cane. It is sweet stalked, very palatable and can be used either for grain or as a fodder crop. This crop is sometimes known as Early Atlas. You will find that it has excellent merit under a wide variety of conditions.

Item No. 221, 1 to 14 bu. **\$6.95 per bu.;** over 14 bu. **\$6.90 per bu.**

Forage Cane

An excellent crop for heavy forage yields. Rich in sugar and fat. Highly drought resistant. Drill in 40 inch rows at 10 lbs. per acre; 20 inch rows 20 lbs. or drilled in close rows or broadcast 50 to 60 lbs. We have two varieties Early Amber Item No. 216 and Early Orange

Item No. 215, 1 to 14 bu. **\$5.85 per bu.;** over 14 bu. **\$5.80 bu.**
